

**”My guys were impressed with how fast and easy the system was to install. The pipes were quickly and easily cut with the electrical pipe cutter.”**

## Case story ROOF drainage at Linnaeus University

During the years 2016-2020, one of the largest building projects in the university city Kalmar located in the southeast of Sweden has been the construction of various modern university buildings in the harbor in the heart of the city. The university is built with sustainability in mind, and the green roof that covers the spacious library is equipped with a UV roof drainage system from BLÜCHER.

### What the client needed

Tomas Johansson works as project leader at the installation company Assemblin VS, and has been in charge of installing the roof drainage system at the new Linnaeus university library:

- We needed a UV system for the building, and we were trusted to choose which one we thought would be the best. We were interested in installing a system made completely of

stainless steel, and we were curious on how it would work compared to a plastic system.

### Solution

A UV-system for roof drainage in stainless steel from BLÜCHER was installed, and the reactions were very positive:

- My guys were impressed with how fast and easy the system was to install. The pipes were quickly and easily cut with

the electrical pipe cutter, and since a stainless steel system requires much fewer pipe hangers, the job with isolating the pipes was also done much faster.

### Results (ROI)

Tomas Johansson is pleased with the UV system from BLÜCHER:

- We got a solid, stainless steel roof drainage system for both

the university library and the tall building behind this one. I have been standing in the building during heavy rain and felt with my hands how the water flushes down the pipes. The system is rock solid and stable. Before we isolated the pipes and they were hidden above the underlying roof, we could also enjoy how straight and nice the piping system looked.

**Customer:** Linnaeus University  
**Location:** Kalmar, Sweden  
**Industry:** Education  
**Category:** Drainage  
**Products installed:** BLÜCHER pipes and fittings, roof drains, floor drains
